

Credora – AI-Driven Credit Scoring Platform for SMEs

Vision

Credora enables SMEs to access finance using AI-driven alternative credit scoring based on mobile money transactions, utility payments, and digital financial history.

Problem

SMEs often lack collateral and formal banking history, limiting access to affordable loans.

Solution

Aggregate financial data through APIs, process it securely, generate explainable AI credit scores, and connect SMEs directly with lenders.

Key Modules

Authentication, SME Profiles, Consent Management, Data Aggregation, Data Processing, AI Scoring Engine, Loan Marketplace, Admin Dashboard.

Technology Stack

Frontend: Next.js, React, TypeScript.

Backend: Spring Boot (Java).

AI: Python, Scikit-Learn, TensorFlow/XGBoost.

Database: PostgreSQL, Redis.

Cloud: AWS/Azure/GCP with Docker and Kubernetes.

Development Roadmap

Discovery → Design → Backend → Frontend → AI Development → API Integration → Testing → Deployment.

Inception Plan

Week 1: Vision & Stakeholders.

Week 2: Business Discovery.

Week 3: Technical Discovery.

Week 4: AI & Data Strategy.

Week 5: MVP Planning.

Expert Pool

Product Owner, Project Manager, Business Analyst, Solution Architect, Backend Engineers, Frontend Engineers, API Engineer, Data Scientist, ML Engineer, Data Engineer, MLOps Engineer, DevOps Engineer, Cloud Architect, Cybersecurity Engineer, Compliance Officer, QA Engineers, UI/UX Designers, Partnership Manager, Technical Writer, Legal Advisor.

KPIs

Reduce approval time, improve prediction accuracy, 99.9% uptime, increase SME financing access, lower default rates.

Future Enhancements

Fraud detection, blockchain audit trails, embedded finance APIs, mobile apps, cross-border financing, AI financial coaching.
