

PROJECT PROPOSAL

Project Title

Credora: AI-Powered Credit Scoring and Loan Assessment Platform

Prepared By

RUYANGE Arnold and Team

1. Executive Summary

Credora is an Artificial Intelligence-powered credit scoring platform designed to assist financial institutions in evaluating loan applicants quickly, accurately, and fairly. The system uses applicant salary information and other financial indicators to generate a credit score that helps lenders make informed lending decisions.

The project aims to reduce manual credit assessment processes, minimize lending risks, improve loan approval efficiency, and increase financial inclusion for individuals who may not have traditional credit histories.

2. Problem Statement

Many financial institutions still rely on manual methods and limited financial records to evaluate loan applications. This process is often:

- Time-consuming
- Prone to human bias
- Expensive to maintain
- Inefficient for large volumes of applicants

As a result, deserving applicants may be denied loans while high-risk borrowers may be approved.

3. Project Objectives

Main Objective

To develop an intelligent credit scoring platform that automates loan applicant assessment using Artificial Intelligence.

Specific Objectives

- Collect applicant financial information.
 - Analyze salary and income patterns.
 - Generate automated credit scores.
 - Predict loan repayment capability.
 - Reduce loan default risks.
 - Improve lending decision speed.
 - Provide transparent assessment reports.
-

4. Proposed Solution

Credora will use machine learning algorithms to evaluate applicant financial data and generate a credit score.

The platform will:

1. Receive applicant information.
 2. Process and validate submitted data.
 3. Apply AI models for risk assessment.
 4. Generate a credit score.
 5. Recommend loan approval or rejection.
 6. Produce reports for lenders.
-

5. System Features

User Features

- User Registration and Login
- Loan Application Submission
- Credit Score Viewing
- Profile Management
- Application Tracking

Administrator Features

- User Management
- Loan Application Review
- Credit Score Monitoring
- Analytics Dashboard
- Report Generation
- System Configuration

AI Features

- Risk Prediction
 - Credit Score Generation
 - Default Probability Estimation
 - Decision Support Recommendations
-

6. Technology Stack

Frontend

- React.js
- Next.js
- HTML5
- CSS3
- JavaScript

Backend

- Spring Boot
- Java
- REST APIs

Database

- PostgreSQL
- MySQL

AI & Data Processing

- Python
- Scikit-Learn
- Pandas
- NumPy

Development Tools

- Git
 - GitHub
 - VS Code
 - Postman
-

7. Expected Outcomes

Upon completion, Credora will:

- Improve credit assessment accuracy.
 - Reduce processing time for loan applications.
 - Support data-driven lending decisions.
 - Minimize loan default risks.
 - Enhance customer experience.
 - Increase operational efficiency for financial institutions.
-

8. Scope of the Project

Included

- Credit scoring system
- User management
- Loan application management
- AI risk prediction
- Administrative dashboard
- Reporting module

Excluded

- Direct loan disbursement
 - Payment processing gateways
 - Mobile banking integration (future phase)
-

9. Benefits

For Financial Institutions

- Faster loan processing
- Better risk management
- Reduced operational costs
- Improved decision accuracy

For Applicants

- Fair assessment process
 - Faster approvals
 - Increased access to financial services
 - Greater transparency
-

10. Project Timeline

Phase	Duration
Requirements Analysis	2 Weeks
System Design	2 Weeks
Development	6 Weeks
AI Model Development	4 Weeks
Testing	2 Weeks
Deployment	1 Week
Documentation	1 Week

Total Estimated Duration: **18 Weeks**

11. Conclusion

Credora is an innovative AI-driven credit assessment platform designed to modernize loan evaluation processes. By leveraging machine learning and financial analytics, the system will help lenders make faster, smarter, and more reliable credit decisions while promoting financial inclusion and reducing lending risks.
